

I would like to add to my earlier comments by saying that I completely agree with the comments filed by Melvin Lehmann, dated Nov 3, 2003. His statements very accurately state the reasons that this RM-10811 should be dismissed entirely.

Stop wasting FCC time, money and resources, move forward and put this issue behind. In the past the statement had already been made that the only reason that code was not dropped below the 5 wpm level was to comply with ITU treaty. That requirement is gone, so why go back through all this process to rehash what seems to have been decided long ago but could not be fully implemented due to treaty considerations at that time?

End element 1 testing requirements and move on to more important matters rather than continuing to waste taxpayer money.
